# The systematic integration of technology enhanced learning for lifelong competence development in a corporate context

---

Roman Senderek

FIR - Institute for Industrial Management at RWTH Aachen University

# Agenda

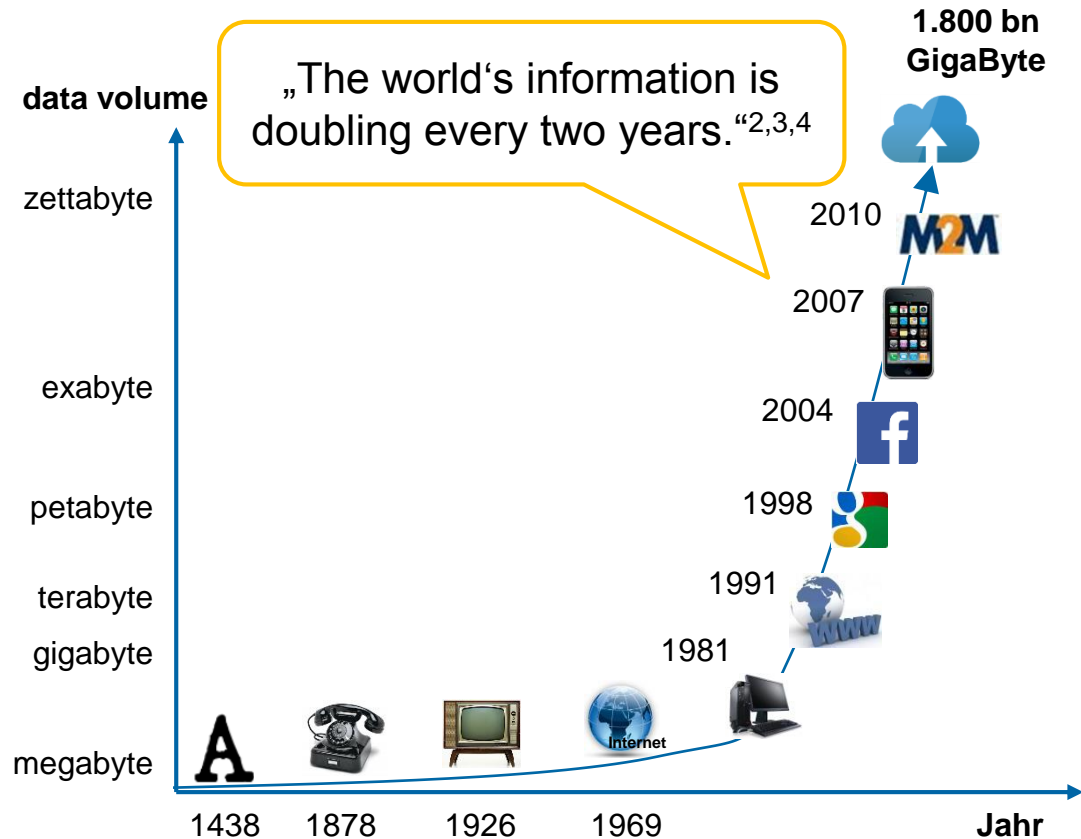

---

- 1 Introduction – current challenges due to digitization
- 2 The integration process of corporate technology enhanced learning
- 3 Conclusion

# The nature of digitization in the private space

What happens in one minute in the internet? <sup>1</sup>	
 ~ 6 M requests	 ~ 4,1 M search requests
 ~ 140.000 \$ turnover	 ~ 350.000 tweets
 ~ 200.000 App downloads	 ~ 100 hours video uploads

~ 650.000 GB per minute

**Each user leaves his digital footprints and creates a digital twin.**

# Degree of digitization across different industries

# The learning factory aggregates data in “digital images“ and anticipates the optimal work and production schedules

# Companies' digitization maturity levels differ across industries and regions

# Labor's development perspectives in a digitized industrial environment

- polarized organizations
- residual non-automatized work tasks remain for humans
- see-through employees
- massive lay-offs
- blurring spatial and systematic barriers

- swarm organizations
- humans decide and control
- highly qualified employees
- creation of new jobs
- better models for work-life balance

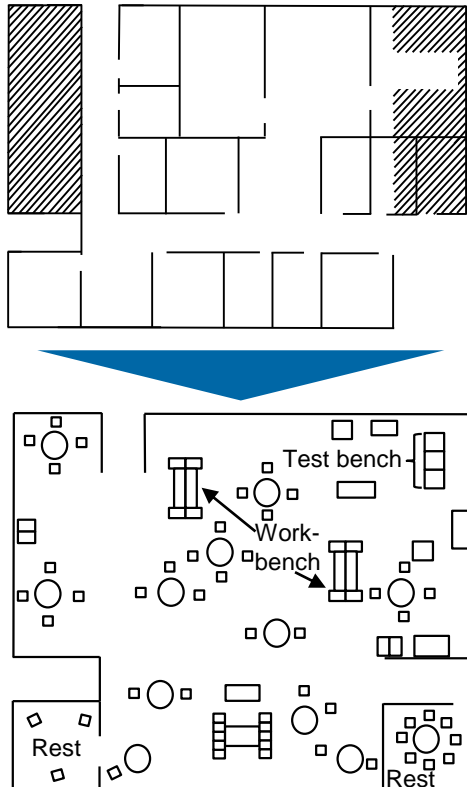

# Future competencies defined by companies

	company's capabilities	employees skills/knowledge
technology-/data-oriented	<ul style="list-style-type: none"> <li>– data evaluation and data analysis</li> <li>– IT security</li> <li>– Cloud architecture</li> <li>– artificial intelligence</li> <li>– user-Support/ service technology</li> </ul>	<ul style="list-style-type: none"> <li>– interdisciplinary way of thinking and acting</li> <li>– managing complexitiy</li> <li>– human - computer/machine – interaction</li> <li>– problem-solving and optimization competence</li> </ul>
process-/customer-oriented	<ul style="list-style-type: none"> <li>– process management</li> <li>– customer relationship management</li> <li>– IT- business analysis</li> <li>– eCommerce/Online-Marketing consulting</li> </ul>	<ul style="list-style-type: none"> <li>– increasing process know-how</li> <li>– participation in innovation processes</li> <li>– coordination of processes</li> <li>– service orientation</li> </ul>
infrastructure-/organization-oriented	<ul style="list-style-type: none"> <li>– handling of specific IT systems</li> <li>– network/ database administration</li> <li>– IT architecture</li> <li>– data security</li> </ul>	<ul style="list-style-type: none"> <li>– leadership competence</li> <li>– autonomous/individual decisions</li> <li>– social competence and communication skills</li> </ul>

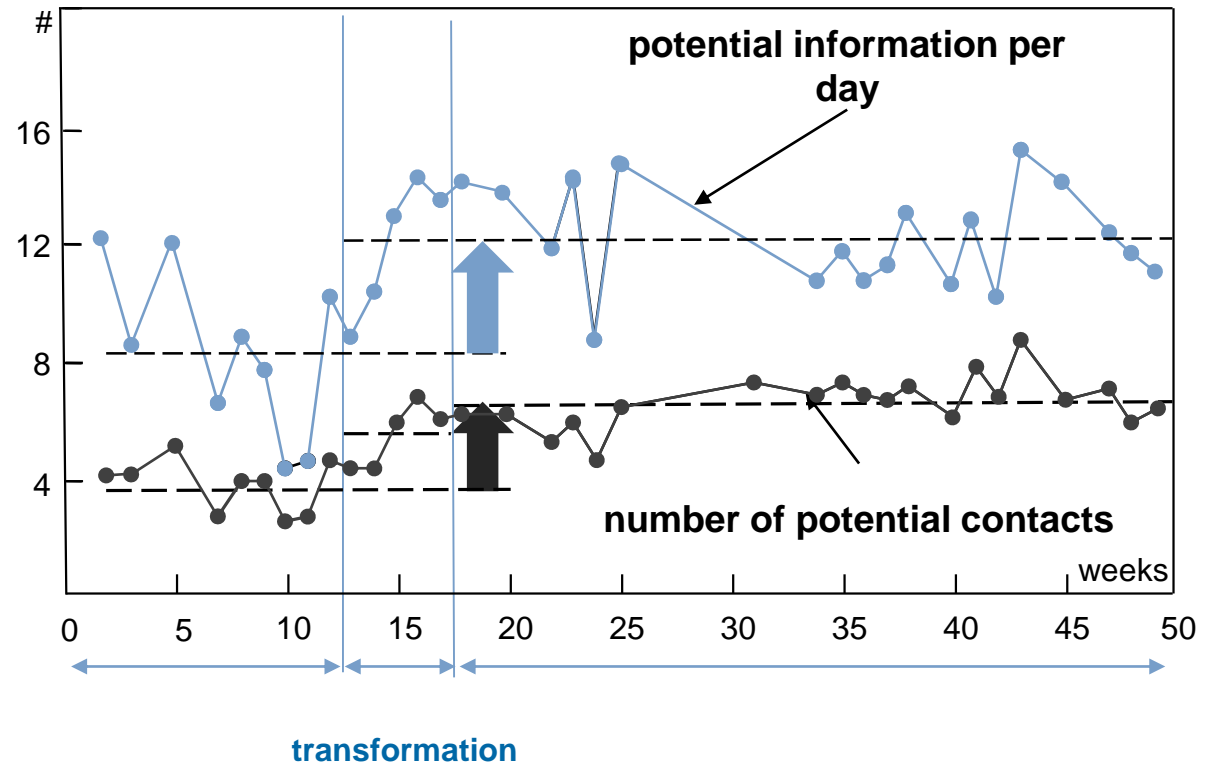

# New digitized work systems will disruptively change information and communication

example: workplace redesign

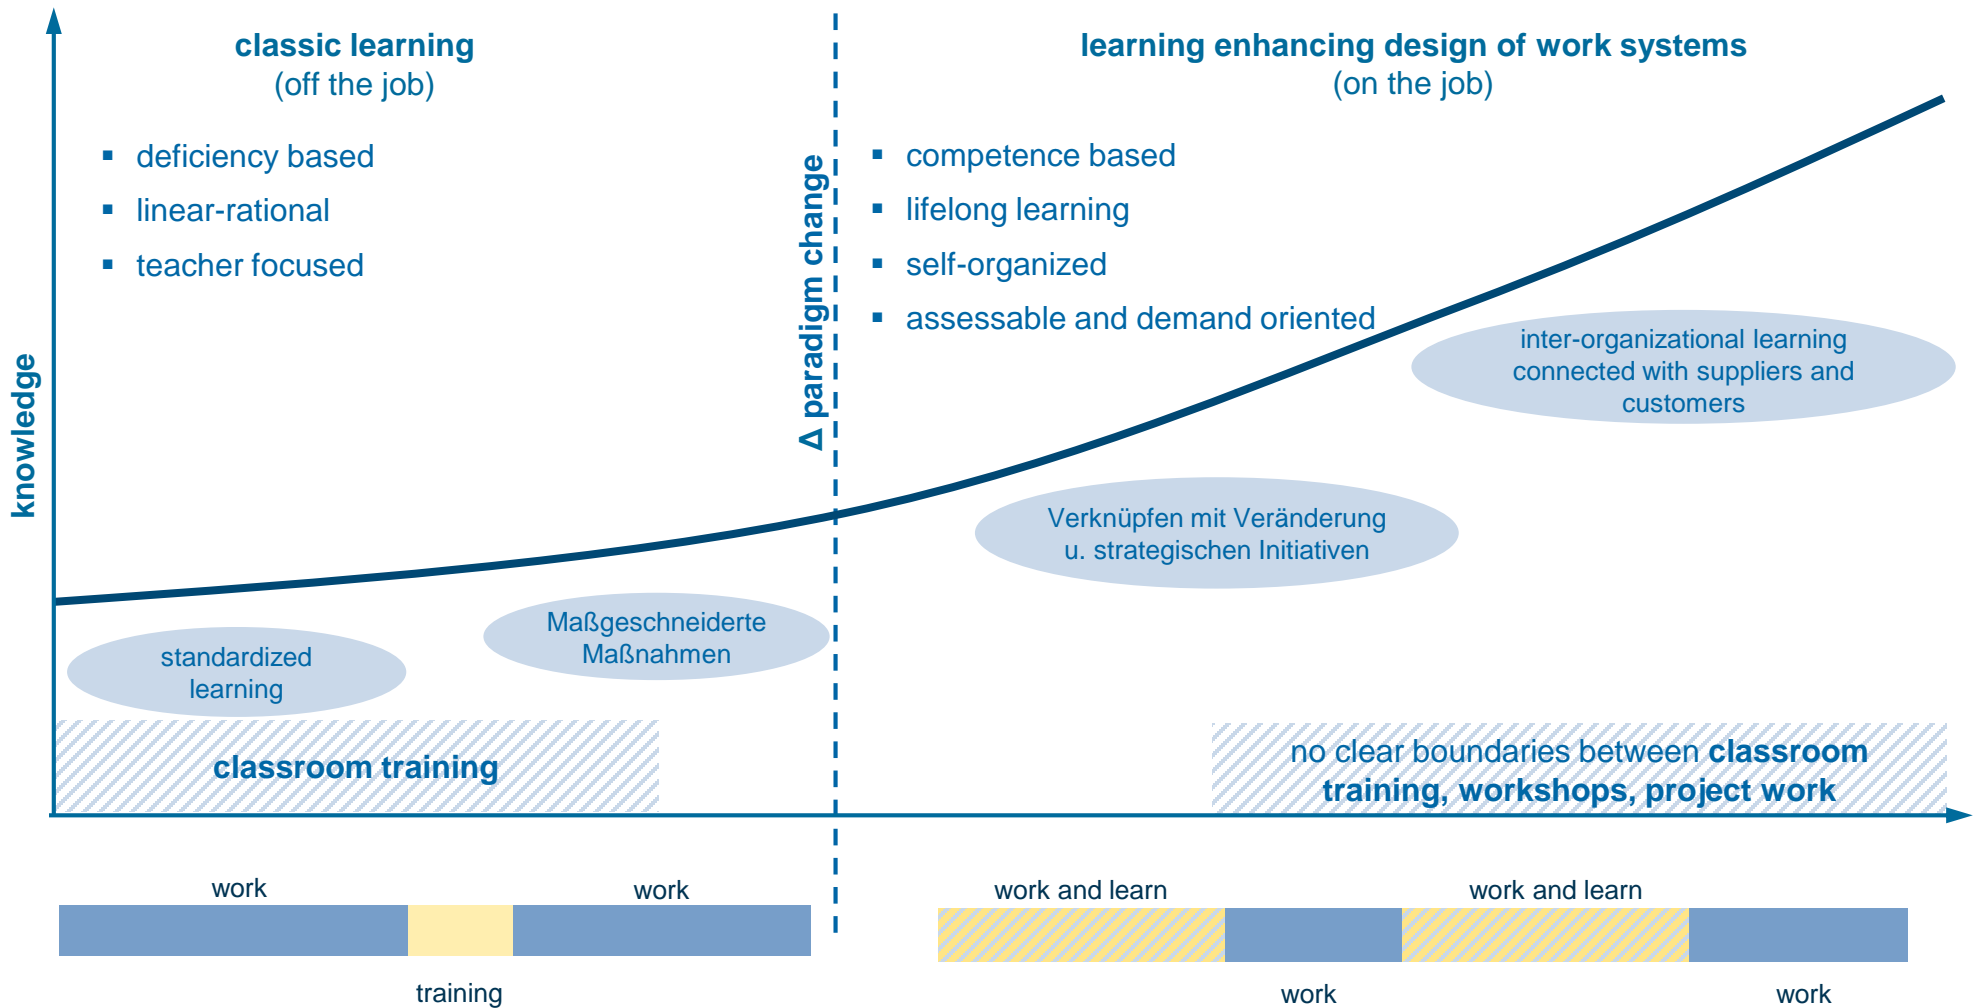

former workplace design

new workplace design

Source: Allen (1984), Pentland (2012)

# Development of corporate competence development

# Learning in a digitized work environment

## The smart factory requires new, flexible and work based competence development programs

- increase of networked production and complexity of production and service processes
- real-time planning and managing of these processes affects work content, work processes and work environments
- shorter innovation cycles lead to technological disruptions
- increase of customization of products and services

- 
- higher employees' flexibility
  - employees have to cope with increasing task complexity
  - employees have to cope with more and more indirect tasks
- 

## Concept for the learning enhancing design of work and production systems for digitized work environments

- learning enhancing design as responsibility of industrial engineering in planning new or reorganizing existing work systems
- adapting employees' competencies to the specific requirements of the smart factory
- selection and evaluation of technologically enhanced learning systems and workplace learning approaches for the future human resource development
- testing and validation in the "Demonstrationsfabrik Aachen" as well as with the project partners

# Agenda

---

1 Introduction – current challenges due to digitization

---

2 The integration process of corporate technology enhanced learning

---

3 Conclusion

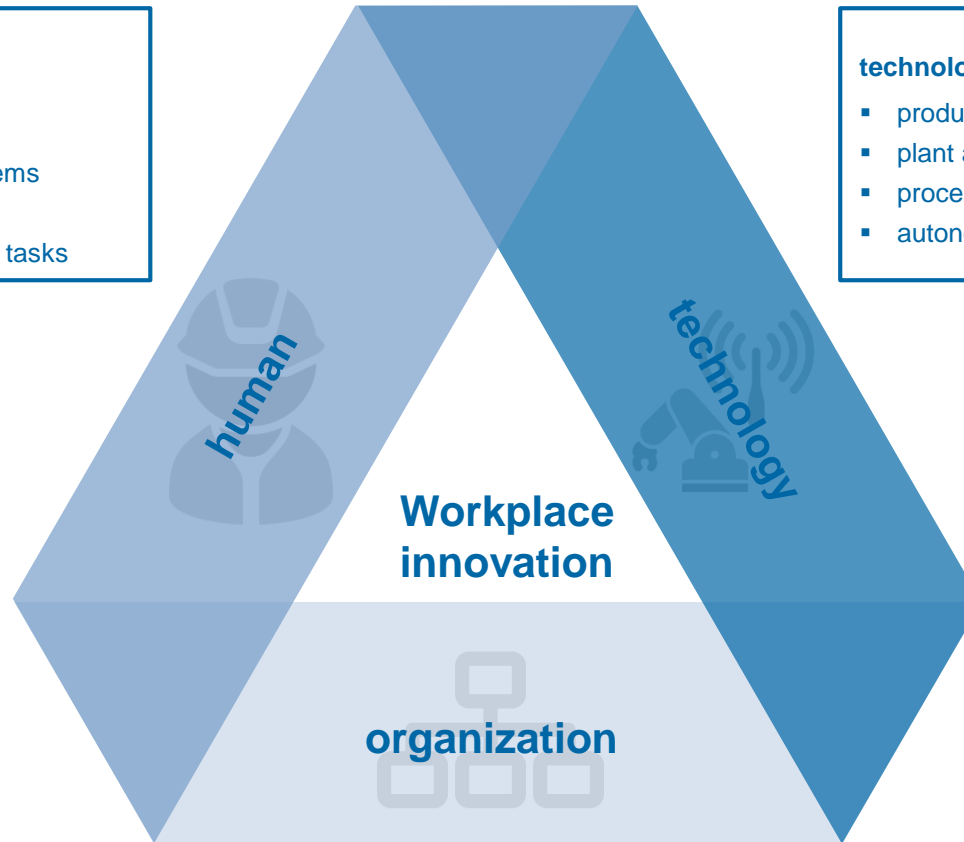

# Digitization: migration approaches

## human perspective

- human role
- human-technology-interaction
- design of intelligent assistance systems
- labor division human vs. automation
- upgrading of qualifications and work tasks

## technological perspective

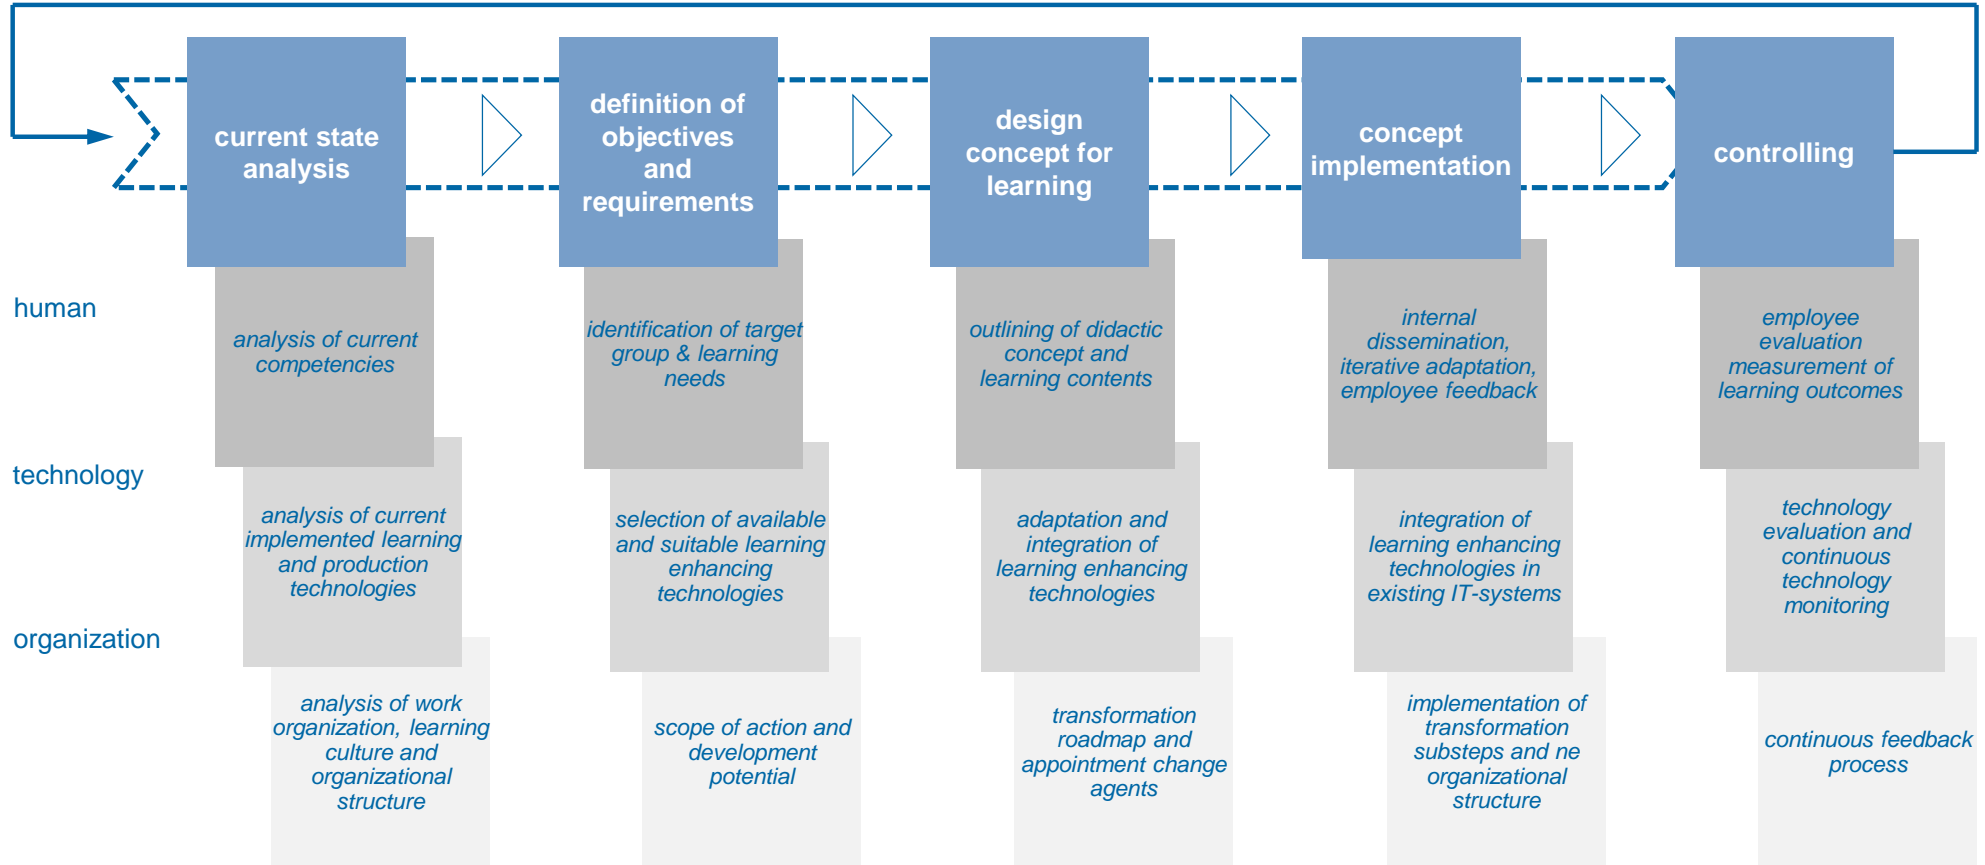

- production system integration
- plant and machinery integration
- processes and logistics
- autonomous self steering systems

## organizational perspective

- cooperation and collaboration
- cross company and internal networks
- value chain integration

# The integration process of corporate technology enhanced learning

# Minimum viable learning solutions in the corporate world

**Linienansicht**

**Störungsansicht**

**Anforderung Unterstützung**

**Anforderung Unterstützung**

[MTM, HELLA]

Weiterer Prozess: Auswertung Statistik, Fehler, Reports, etc.

Weiterer Prozess: Vollisierung  
 • wenn vorhandene Fehlerdok. in der DB geladet werden  
 • Prüfung auf formale Einträge  
 • Prüfung auf doppelte Einträge

**Der Ansatz:**  
 1. Weltweiter Roll-Out bis Ende 2016 (Stabilisierung der HELLA-APP)  
 2. Problemlösung verbessern (Fotos, Sprachfunktion, ...)

- HELLA KGaA – one of the largest automotive suppliers in Germany (35.000 employees)
- developed a mobile application for conjoint failure recognition and solution
- feedback opportunities and continuous improvement
- worldwide rollout this year

- FEV GmbH – an internationally active company specialized in engineering solutions (4.000 employees)
- developed a learning enhancing software solutions for application processes of electrical controlling devices of automobile engines
- based on expert knowledge of lead users, a software tool was created that visualizes processes and can guide personnel step-by-step to the solution of a task

# Agenda

---

- 1 Introduction – current challenges due to digitization
  - 2 The integration process of corporate technology enhanced learning
- 

## 3 Conclusion

---

# Summary

- **digitization**, the main driver of industrial transformation, develops at a rapid speed
- integration of human resource development, information technology design and work design is necessary
- the decisive factor is the initial **positioning** of the company itself on its **path to a digitized production** – where do we stand today?
- The effects of digitization will **change labor and work organization** in the industrial production significantly
- The **requirements** for employees' qualifications and competencies will **increase significantly**
- new **approaches for work-based human resource development** will be necessary to cope with the effects
- **minimum viable learning solutions** are a way to lead companies and their employees to a digital production and service world

# Thanks a lot for your attention!
